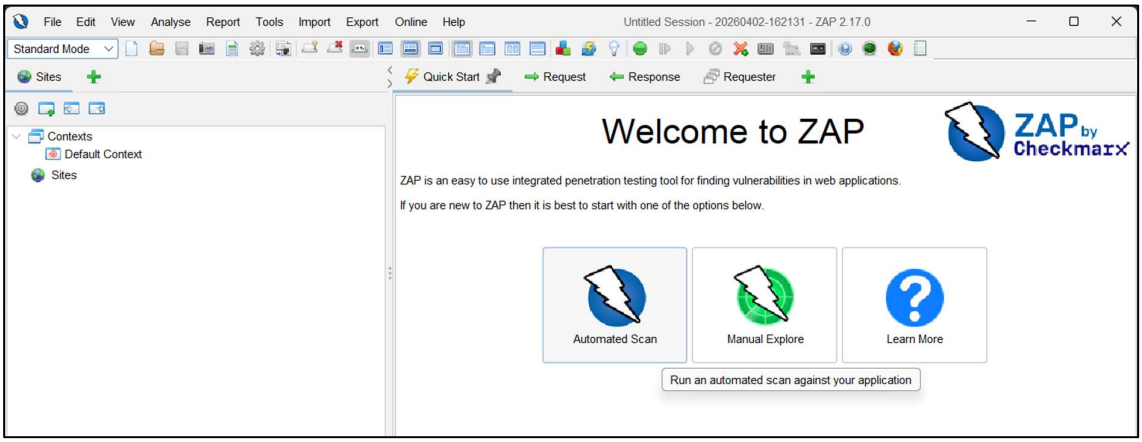
Experiment 11

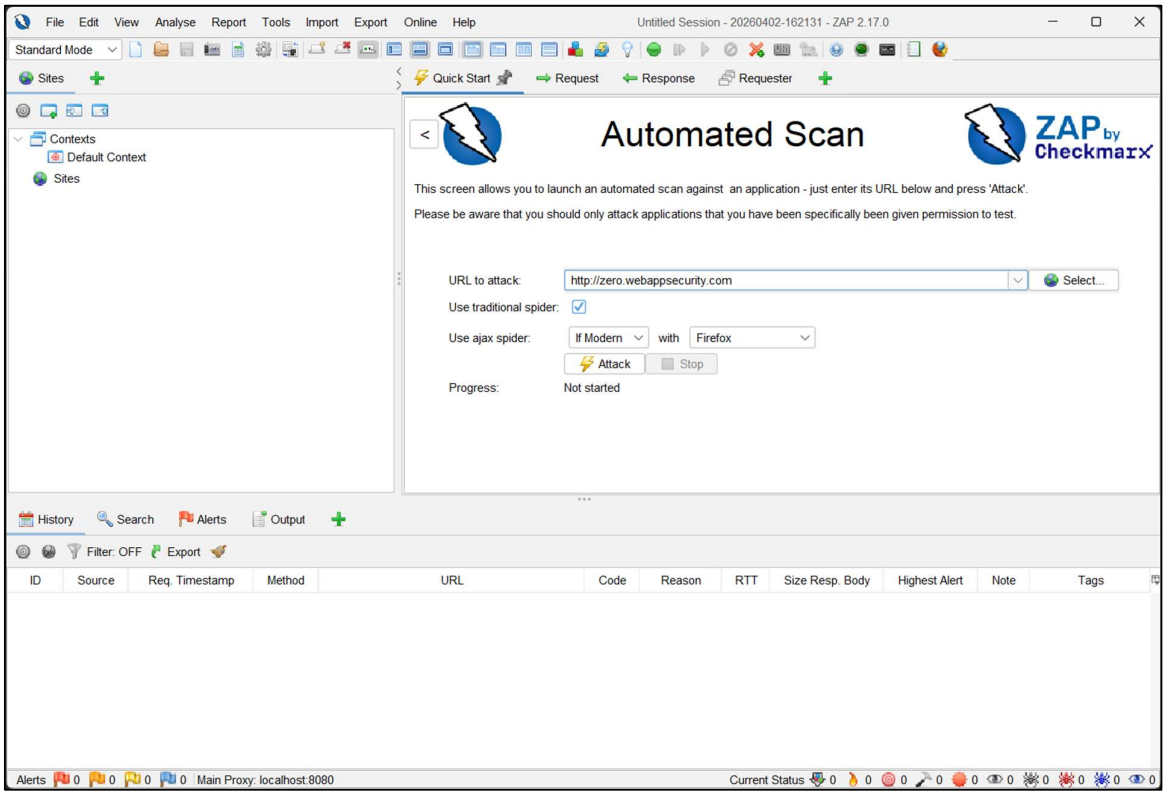
AIM: Use OWASP ZAP to check security integrity

→Install OWASP ZAP and Start



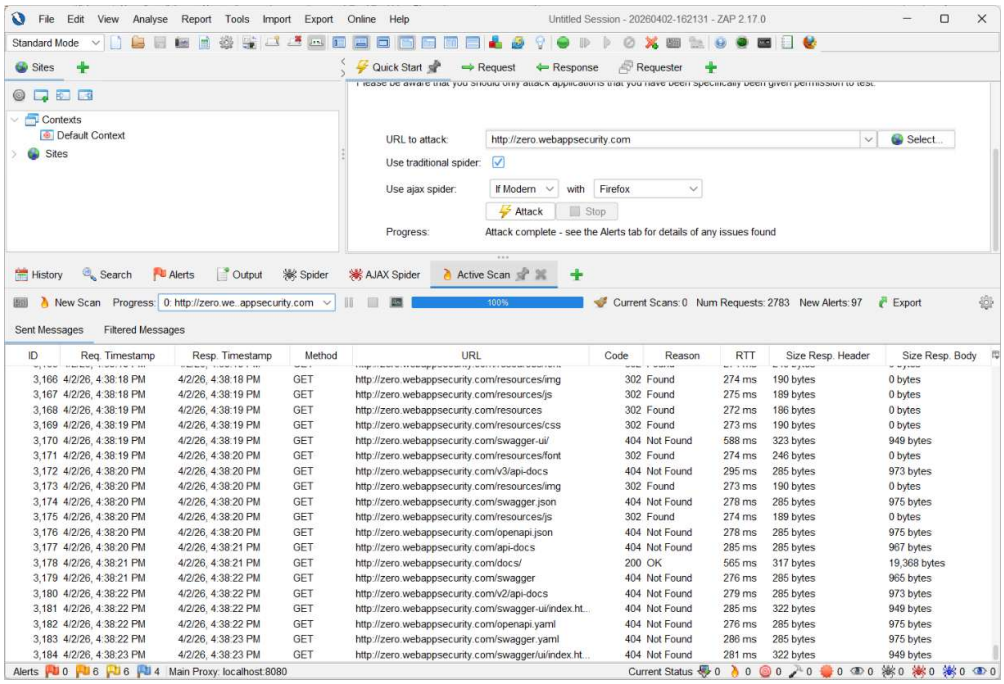
→Click on Automated Scan

Enter URL:" http://zero.webappsecurity.com" and Start Scan



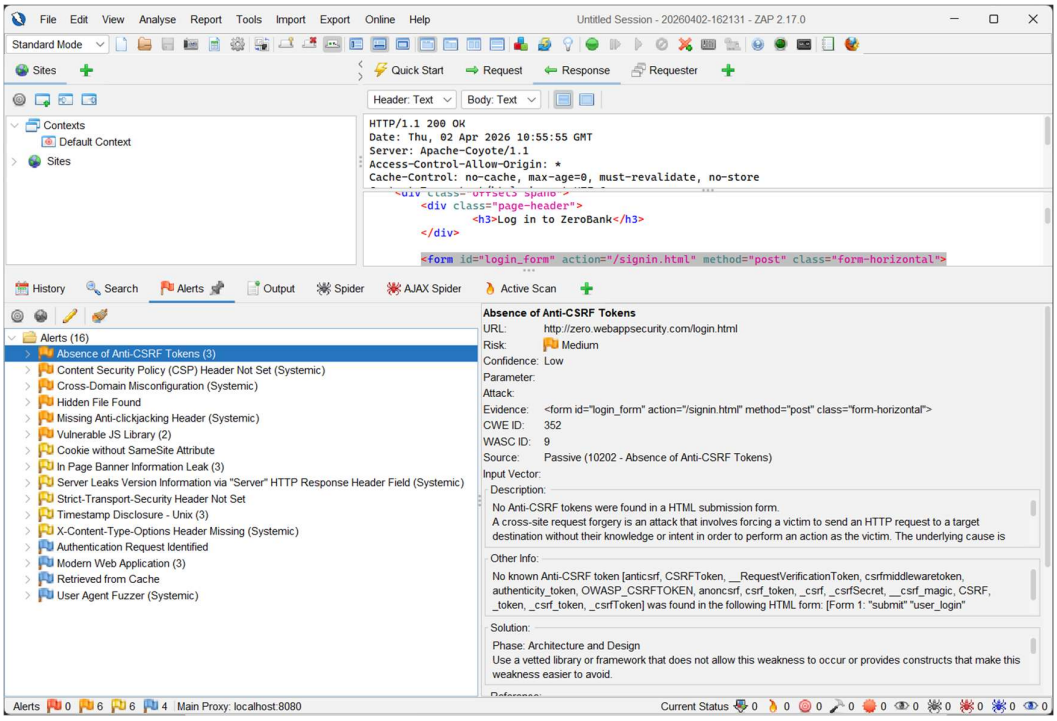
→Active Scan

Shows OWASP ZAP Active Scan results with multiple HTTP requests and responses for the target application. It lists scanned URLs, status codes, and response details, indicating how the tool identifies potential vulnerabilities.

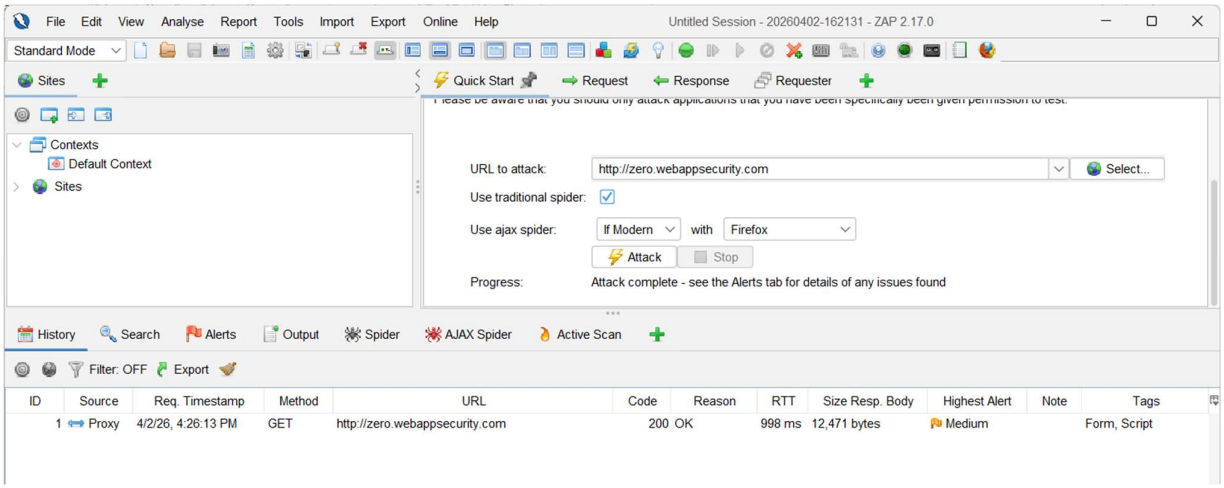


→Alerts

Displays OWASP ZAP alert highlighting "Absence of Anti-CSRF Tokens" in the login form, indicating a medium-risk vulnerability.



→History

Represents the active scan summary in OWASP ZAP with the target URL and scan status completed.


It lists request details and indicates detected vulnerabilities with a **medium** alert level.
